

# ‘KRIMSON’

‘Krimson’ is a large-seeded cranberry bean with high yield potential as demonstrated in numerous regional trials throughout the U.S. and Canada. Across 8 locations in North America ‘Krimson’ averaged 5 days earlier maturity, larger seed size, and slightly higher yield compared to the check cultivar ‘Etna’. Crimson-colored flecking on a bright background makes ‘Krimson’ stand-out from the crowd.

- Maturity: 81-93 DAP (AVG 87 DAP)
- Plant Type: Determinate bush
- Seed Size: 60 g/100 seeds (757 seeds/lb)
- Resistance: BCMV; BCTV; Rust (T)
- Color; Red flecks on off-white
- Type: Cranberry:
- Replaces: Etna

Variety information is based on specific field and laboratory conditions. Information presented is considered to be accurate at the time of publication of this sheet. However, your results may vary significantly depending on location, weather conditions, and cultural practices, and therefore, your results are not guaranteed. Do not risk any production until you have tested the variety to your satisfaction under your growing conditions. Read all tags, labels, and invoices, which contain conditions of sales and limitations of warranties and remedies.
